

GIS in action

Just before Christmas our Year 12 Geographers were introduced to the world of Geographical Information Systems when Petra Brown, a parent of two students at the school, came in to give them an in depth presentation on the ins and outs of using GIS. The students learnt the differences between vectors and rasters, how different layers can be added to maps and were then able to put the theory into practice by using the GIS software AEJEE (which is free for anyone to download from the internet). GIS is an integral part of AS Geography and Petra certainly gave our geographers an excellent insight into the subject. Thank you Petra!
